

UI design in Figma

I based the design on a schedule used for streaming in the Twitch platform
For the mockup design for desktop and mobile in Figma I used:

-The following color palette

I used the palette from a previous personal project.
Using the palette I also made this logo for the page

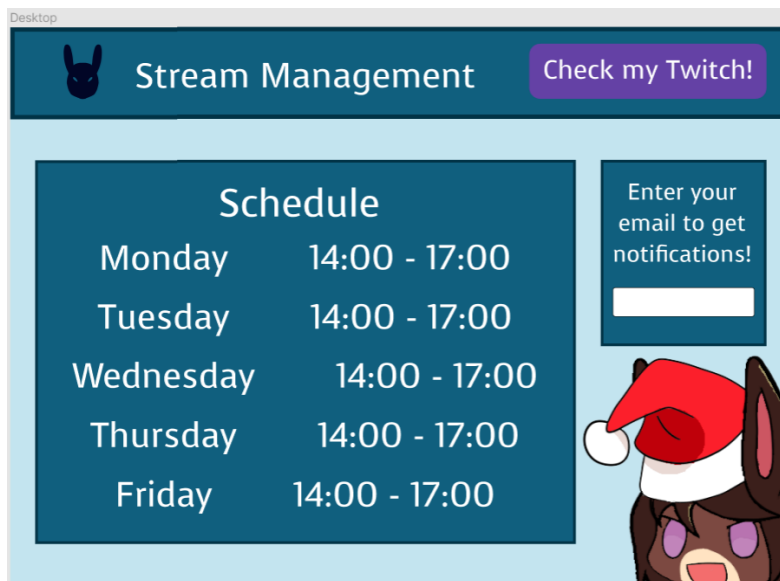

There's also the mascot I use for streaming in the corner of the webpage in christmassy clothing.

-Although I used a different font in Figma, I plan to use **Segoe UI** in the actual webpage. The main font sizes I used were 8vh, 5vh, 4vh, 44px and 20px . For most fonts I either used white or the #D8EDF2 color from the palette.

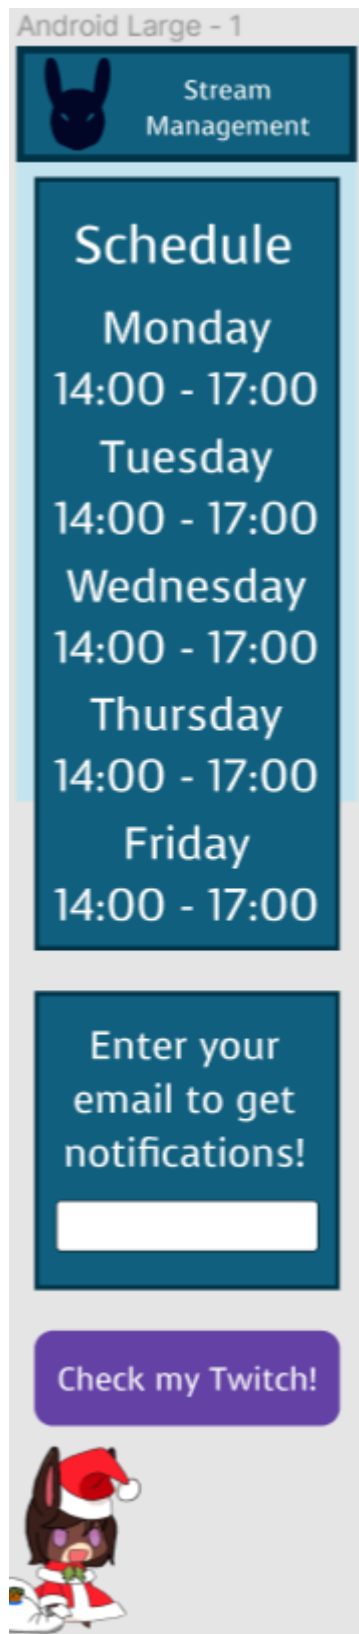

-In Figma the media query threshold was different, but in the final Webpage the threshold I used was 600px

-The webpage didn't include a dropdown menu even though it was required because I couldn't think of any useful way to implement it, so I decided to not implement it if the implementation would just conflict with the original idea and not add much to the project overall.

-Here are images from the mockup and the Figma link:
<https://www.figma.com/file/SnEUZBdSM36hC8adlhTzIN/CSS-Project?node-id=0%3A1>

The phone version is this long because it is scrollable.

Publishing

The page is published here: https://portalfan202.github.io/HTML-CSS_Assignment/
